THE L-WAT MINIFIED MOBILE VERSION API

Routes Prefix
http://127.0.0.1/api/

User Roles
- Client
- Partner
- Associate

User Roles that login
- Associate
- Partner

Guest Uer role
- Client

Login Creds for each
Associate
- **esther@gmail.com**
- **123456789**
Partner
- **fred@gmail.com**
- **123456789**

Note: 1. On the mobile app, the associate and the partner user roles perform the same roles i.e. do the same things as listed in the next section. So Associate == Partner
Note: 2. All succeeding accesses after login must have the **bearer token** in the headers and a header type of Accept, application/json
Note 3. The Content-Type header should be set to application/json

Associate/Partner funcs
- When click on 'login' link at landing page, access login page

Request Type	Endpoint	Payload	Response 200	

POST	/login	{
		  "email" : "",
		  "password" : ""
		}
			{
			  "token" : "",
			  "error": false,
			  "defaultPassword: ""
			}
				{
				  "error": true,
				  "message": ""
				}

GET	*/user/cases*	NONE	{
			  "error": false,
			  "cases": []
			}	

POST	*/user/view/case*	{
		  "case_number": ""
		}
			{
			  "error" : false,
			  "data" :
			    {
			      "case": "",
			      "client": "",
			      "meetings": "",
			      "tasks": "",
			      "notes": ""
			    }
			}
				{
				  "error": true,
				  "message": ""
				}

POST	*/user/schedule/meeting*	{
		  "date": "".
		  "time": "",
		  "agenda": "",
		  "venue": "",
		  "caseID": ""
		}
			{
			  "error": false,
			  "message": ""
			}
				{
				  "error": true,
				  "message": ""
				}

POST	/user/add/casetask	{ "task": "". "caseID": "" }	{ "error": false, "message": "" }	{ "error": true, "message": "" }
POST	/user/add/casenote	{ "note": "". "caseID": "" }	{ "error": false, "message": "" }	{ "error": true, "message": "" }
GET	/guest/view/firms	NONE	{ "error": false, "firms": [] }	
POST	/guest/view/firm	{ "firm_id" : "" }	{ "error": false, "firm": [] }	
POST	/guest/contact/firm	{ "name": "". "email": "", "contactChoice": "", "query": "", "phone": "", "firm_id": "" }	{ "error": false, "message": "" }	
POST	/guest/search/firm	{ "pattern": "" }	{ "error": false, "firms": [] }	

			}	

GET	/logout	NONE	{
			    "error": false,
			    "message": ""
			
			}	

IMPORTANT NOTES

The contactChoice field in the */guest*/contact/firm route is an enumeration of value, either 1 or 2, and so you might need to represent it via dropdown, radio or checkbox.
